

## Donaldson Delivers Replacement Filters for Pall® Athalon™ and Ultipleat® SRT Housings

Pall®, Athalon®, and Ultipleat® are registered trademarks of Pall Corporation.

The Donaldson hydraulic product line has expanded to include replacement cartridges for Pall Athalon and Ultipleat SRT style housings. Donaldson cartridge filters provide protection from particles and contaminants that reduce the effectiveness of lubricant and hydraulic fluid. Using Donaldson DT High Performance synthetic media technology, these filters have long life and provide excellent system protection.

## Better by Design

These high-performance cartridge filters feature an advanced pleat pack design that provides high initial cleanliness and dirt holding capacity.

- Double wire backed with an epoxy-coated steel mesh for excellent pleat support and spacing, which allows for maximum media area and excellent protection during operating pressure surges
- Utilizes glass fiber high performance synthetic media with an epoxy-based resin system and is potted with epoxy-based adhesives
- Fluorocarbon O-ring seals for excellent compatibility with a wide range of fluid types

### Utilizing DT High Performance Synthetic Media Technology

Donaldson DT High Performance synthetic filter media has smooth, rounded fibers for low resistance to fluid flow. It is ideal for filtering synthetic fluids, water glycols, water/oil emulsions, petroleum-based and high water content fluids (HWCF).

- High-efficiency media grades with performance to  $\beta_{<4(c)}=1000$  (per ISO 16889)
- Exceptionally low flow resistance
- Consistent performance throughout filter life

### Electrostatic Discharge (ESD) Reduction

Donaldson SRT replacement filters are designed to resist charge generation and reduce the occurrence of electrostatic discharges induced by the flow of fluids through the filter media – a known industry problem which can result in damage to the filter and degraded performance.

### Proven Protection

These filters are proven and reliable – protecting systems from harmful ingressed contaminants. The inside to outside flow path also reduces the likelihood of cross-contamination during filter service.
