**ELECTRICAL REQUIREMENTS**

- Collectors up to DLM V20/10\*:** 2-, 3- or 5-way controller
- Collectors from DLM V20/10\* upwards:** 10-way controller
- Controller voltage input:** AC version: 105-120V, 200-240V, (±10%)  
DC version: 24V
- Fan motor (if fitted):** To suit local voltage

\* The DLM V20/10 can be supplied with either 5- or 10-way controller

**DESIGN LIMITS (standard equipment)**

- Temperature range** (alternatives according to type of sealer used): (1) -10° to +60°C; (2) -10° to +200°C (not type F)
- Pressure limits:** (a) Types B, W and H: -400 mmW.G. (For positive pressures please refer to Donaldson)  
(b) Type S: -3000 mmW.G. (For positive pressures please refer to Donaldson)  
(c) Type F: as fan performance curves from shut-off to operating pressure
- Dimension tolerances:** ±5 mm on main dimensions; ±2 mm on detail dimensions

Equipment is available suitable for use in a potentially explosive atmosphere (Directive 94/9/EC) satisfying the requirements for group II category 2G or 2D and 3G or 3D T135°C

**Dalamic Insertable Dust Collectors – Series DLM V**

**FAN PERFORMANCE CURVES**

**FAN SELECTION**

To select the most suitable fan for a given application:

- 1 Determine the air volume (m³/h) needed to give effective venting and dust control.
- 2 Estimate pressure or suction (mm W.G.) in the housing in which the dust collector is inserted.
- 3 Assess the operational pressure drop (mm W.G.) across the clean side and dirty side of the filtering elements – usually between 25 to 100 mm W.G.
- 4 The sum of 2 and 3 gives the pressure (mm W.G.) required for fan selection purposes.
- 5 Consult graph for fan performances available.

**NOISE LEVELS**

Machinery noise levels are an important consideration in the design and selection of new equipment. Several EC Directives and National Laws/Regulations adopting these directives make reference to airborne noise emissions. Actions that employers are required to comply with if employees are subjected to a daily personal noise exposure  $L_{ep,d}$  of 80 dB(A) or more are also specified.

**WEIGHTED SOUND PRESSURE LEVELS**

All readings were taken in normal industrial areas, i.e. semi-reverberant surroundings, with local equipment silent. Measurements were taken at maximum air flow conditions at 1.0 metre radius from the equipment housing and 1.6 metres above base level, using a precision sound level meter and octave filter.

	<b>F1</b> (0.75 kW)	<b>K3</b> (1.5 kW)	<b>K5</b> (2.2 kW)	<b>K7</b> (3.0 kW)	<b>K10</b> (5.5 kW)	<b>K11</b> (7.5 kW)	<b>K15</b> (11.0 kW)
With acoustic diffuser	76 dB(A)	73 dB(A)	74 dB(A)	76 dB(A)	79 dB(A)*	84 dB(A)	85 dB(A)
Without acoustic diffuser	91 dB(A)	89 dB(A)	92 dB(A)	93 dB(A)	94 dB(A)	97 dB(A)	99 dB(A)

Noise levels of installed equipment may vary due to site conditions. \*Estimated data.

**DALAMATIC INSERTABLE ACOUSTIC DIFFUSER DETAILS**

Suitable for inside and outside locations.

Nominal clearances for maintenance are as shown on page 4.

\* Note: On models DLM V4/7FAD, V6/10FAD, V7.5/12FAD, V8/7FAD, V9/15FAD, V12/10FAD, V15/12FAD and V18/15FAD the acoustic diffuser overhangs on the left and the controller is on the right (as illustrated). On models DLM V50/12FAD-K15, V60/15FAD-K15, V70/17FAD-K15 and V80/20FAD-K15 the overhang is on the right and the controller is on the left. On all other models there is no overhang and the controller can be fitted on either side. In all cases the compressed air inlet pipe is on the opposite side to the controller.

**OPTIONAL VERTICAL HOUSING DETAILS**

Vertical housing for DLM V8/7 or V12/10 illustrated.

**Dalamatic Insertable Dust Collectors – Series DLM V**

\* Nominal clearances for maintenance  
 Where space is restricted please consult with Donaldson. Clearance of at least 150 mm to be left on all sides of the filter elements.

**DALAMATIC S TYPE INSERTABLE DUST COLLECTOR**

Model DLM V40/20S illustrated, broken lines representing models DLM V14/7S, DLM V20/10S, DLM V25/12S, DLM V30/15S and DLM V35/17S. Suitable for inside and outside locations.
